Find Canadian AI companies. See what they build.

One research question became an evidence-linked list of companies, their locations and their AI products and services.

The task: “List Canadian technology startups focused on building AI products and/or services.”

BenchSci

Toronto · Biomedical AI

AI that helps researchers identify antibodies, reagents and experimental discoveries.

Company + evidence →

Waabi

Toronto · Autonomous trucking

AI-first autonomous transportation, using simulation-driven machine learning.

Company + evidence →

Cohere

Toronto · Enterprise AI

Large language models and generative AI for business applications.

Company + evidence →

Examples from the saved report: technology companies with Canadian-location and AI-offering evidence. The full report retains citations and fields needing further review.

IT FOLLOWED DISCOVERIES—NOT JUST THE INITIAL SEARCH

Following a product mention identified its creator.

The agent followed the Folkly profile and found evidence linking the archiving platform to **Calgary-based ORKA AI**. This demonstrates autonomous follow-up, not AI-product qualification.

AI focus	AI consulting firm SUPPORTED [F442]
Company offers AI product or service	Built the Folkly platform, a cultural archiving platform for Western Canadian museums and archives SUPPORTED [F539]

Original report excerpt. An AI consulting description plus a product connection does not establish that Folkly uses AI. Click for the full card.

Source profile → Creator evidence + Location evidence + Creator–product connection → Report entry

THE ENGINEERING BEHIND THE USEFUL RESULT

Research that advances itself. Evidence a person can inspect.

Three deliberate design choices

1. Follow the evidence.
Rank discovered links, visit selected destinations and feed new knowledge into the same report.

2. Preserve the trail.
Keep source references beside each finding so a reviewer can inspect how the answer was assembled.

3. Bound the work.
Use concurrent batches, request budgets and saved results to handle larger tasks and recover useful work.

Inspect the result yourself

Static report and presentation: no API key needed. The detailed case study covers source quality, duplicates, qualification gaps and model usage.

Collected: 14 parsed documents · 1,221 retained extraction records · two research rounds.
Delivered: 49 cited report rows, including the company examples shown here, for human review.
